

## School Garden: Post 16

In the school garden we have been planting a range of plants and vegetables including, tomatoes, potatoes, beans, sunflowers, peas, radish, rhubarb and sweet pea. We have been learning to stay safe in the garden when using tools.

We have also been making our garden bird and mini-beast friendly, this is to encourage more wildlife in our school garden. We constructed bird feeders to try and encourage more birds to visit our garden.

We have spent some time this term doing an application for some funding to Key Fund to secure some new tools for the school garden. We have been budgeting and creating plans for funding. We have shared ideas with staff and peers.
