## ICT at Court Fields School

Here at Court Fields School we use a range of ICT services that can be accessed by both students and parents. This document will briefly explain a few of the key points about them.

- **CourtFields.net:** This is our schools public facing website and Virtual Learning Environment for the students. This means students are able to login to CourtFields.net and access a range of services. Students will be given their login details during their first IT lesson. Some of the ICT services which are available to students via CourtFields.net are accessed through a special Google account which is managed by the school, this gives them access to the following:
  - **Google Doc's\Drive:** An online storage area that students can save work to so it can be accessed by them anywhere in the world when connected to the internet. It also allows them to share their work with other students for collaboration, or with staff who can then mark the work or provide assistance with it.
  - **Google Mail:** An account that students can access to send and receive emails. This system has a special filter that will detect attachments, inappropriate words/content and report spam emails. Students can email other students and staff using this system.
- **Parents Evening Booking System:** The Parents Evening Booking System or PEBS is a website that allows parents to enter their own preferred appointments for school parents evening sessions. Parents login using basic personal details so no username or password is required.
- **ePraise:** An online school rewards system and homework for secondary schools designed to motivate students to work harder, attend more and behave better. Students can login to track how many points they have been awarded and what achievements they have earned as well as tracking their homework. Parents can also sign up to view their student's rewards and homework using their email address if the school has their email on record.
- **Wireless (WiFi):** Here at Court Fields School we have a top of the range wireless networking system with intuitive real-time internet filtering which provides coverage across all of the school grounds. Where appropriate, teachers will encourage students to use their own devices (smart phones, tablets, laptops etc.) to connect to the wireless system for conducting internet research when not in a computer room. In order for students to use the wireless system, an Acceptable Use Policy (AUP) needs to be signed which should be handed back to the school.
