Problem Solving

INTRODUCTION

Problem solving is usually centre based and involves the use of a variety of equipment to solve mental and physical challenges.

VENUE

Usually Centre based but can include any area deemed appropriate for the problem.

STAFFING

- Any instructor or visiting leader with an awareness of group control.
- For those problems with specific technical requirements the pre-requisites are the same as the operating procedures for that activity.

EQUIPMENT

- Majority of the equipment is kept in the problem-solving store.
- Problem solving ropes are marked with a split end, must **not** be used for climbing purposes and must be returned to the correct store after use.
- A separate file is available that describes a number of problems and the equipment required.

OPERATING CONSIDERATIONS

- Awareness of hazards involved with each of the problems.
- Faulty equipment recorded and removed.
